## Concerning: brine valve MultiMix, NoNitrate systems

Dear Customer,

In our continuous effort to further improve the quality of our products, we are implementing the following modification on all MultiMix and NoNitrate systems, that feature a separate brine tank.

The brine valve used in the brine tank assembly is upgraded; the current  $\frac{3}{8}$ " brine valve is replaced by a  $\frac{1}{2}$ " brine valve; the brine polytube connection remains  $\frac{3}{8}$ ". To accommodate this larger brine valve, the current  $\varnothing 90$  mm brine well is replaced by a larger  $\varnothing 100$  mm brine well.

This new configuration will be introduced in our assembly as of Febr. 1<sup>st</sup>, 2016.

Please do not hesitate to contact our sales team if you need any additional information on this topic.
