## **Concerning: bypass without mixing valve, for Rotary**

Dear Customer,

We hereby wish to inform you about a new accessory for our ProFlow Oxydizer & Oxydizer+ systems.

Until now, the factory bypass valve for our 1" Rotary control valve, that is used on our 1" ProFlow systems, is only available with integrated mixing valve (to mix some untreated water with the treated water, typically used to increase the residual water hardness at the outlet of a water softener).

For our iron/manganese/hydrogen sulphide filters, the ProFlow Oxydizer & Oxydizer+, such a mixing valve is not needed at all. So particularly for these systems we have developed a factory bypass without mixing valve. The Part Number for this new factory bypass without mixing valve is 72668.
