## **Concerning: electrical cables on control valves of ProFlow systems**

Dear Customer,

In our continuous effort to further improve the quality of our products, we are implementing the following modifications on all control valves used on our ProFlow commercial/industrial water softeners and filters.

First of all, we will extend the electrical cables inside the timer housing of the control valve. Furthermore we will apply a cable tie for the fixation of the electrical cables inside the timer housing. The advantages of these modifications are:

- easier removal of timer housing from back plate, without need to unplug the cable connectors;
- proper fixation and routing of the electrical cables inside the timer housing;
- cable tie is releasable/resealable for ease of maintenance.

This modification will be implemented in our assembly as of today.

Please do not hesitate to contact us if you need any additional information on this topic.
