## Concerning: check disc 541 valve

Dear Customer,

In our continuous effort to further improve the quality of our products, we are implementing the following modification on the 541 control valve; this is the control valve that is used in Micro, H2Optimo, Sentencia, Maxima, Softena, Slimline, IQsoft and Ultra systems.

The check disc used in the 541 control valve (item 16 in figure below), will be provided with a 'snap connection' to hold the spring (item 15 in figure below) in place. This modification makes the 541 control valve easier to service, as the spring will no longer drop from the check disc during assembly.

This modification will be implemented in our assembly as of today.

Please do not hesitate to contact us if you need any additional information on this topic.
