Concerning: Modified packaging of accessories for our residential systems

Dear Customer,

In our continuous efforts to further improve the quality of our products, we introduced a new procedure to assemble the accessories of our residential ranges:

Packaging of the accessories:

As of last week all accessories are packed together in a plastic bag that is put inside the cabinet itself. This standardization will simplify the final quality control on our assembly line for residential systems.

This upgrade is introduced in our production as of 13 November 2017.

Please do not hesitate to contact us if you need any additional information on this topic.
