Concerning: Modifications brine line

Dear Customer,

In our continuous efforts to further improve the quality of our products, we are implementing the following modification on the brine line of the complete systems of our residential & commercial hospitality range (IQS/CS, SLI/CS, SLI/MMX, SOF/CS, SOF/MMX, MAX/CS, MAX/CS, H2O/CS, SEN/CS):

Length of polytube

In the current cabinets the polytube of the brine line is too long and can lead to unnecessary pressure on the Quick-fit connection due to the weight of salt. Therefore we are adjusting the length of the polytube.

Replacement of Quick-fit elbow 3/8"

The current Quick-fit elbow 3/8", used between the brine valve and the polytube of the brine line (14), will be replaced by another Quick-fit elbow from Parker-Hannifin; this part is already used as brine elbow on our 541 control valve.

The above described upgrades are introduced in our production as of 1/01/2018.

Please do not hesitate to contact us if you need any additional information on this topic.
