## **Concerning: Changes to valves and accessories packing**

Dear Customer,

As many of you know, Erie water treatment many years ago made the shift from selling valves and components to complete water treatment systems.

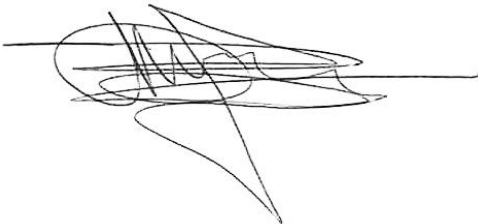

A very minor part of our customers today still continues to buy valves and valve accessories separately instead of complete systems. In an attempt to make our packing procedure for valves and accessories more efficient we have therefore made the following changes.

As of February, the goods will be packed as follows:

- Control valves packed WITHOUT accessories
- Accessories packed separately from the valves.

For our valves customers this means that when you take a valve from a box, you will now find the accessories in a box(es) separate from the control valves. For a small quantity of valves + accessories, if it fits in 1 box, of course everything will be packed together!

Very best regards,

Björn Verschaeve  
Sales Manager
